

Serious Regulatory Compliance. Seriously Easy to Use.

Quality involves many people, which makes the interface design an important part of your quality documentation system. The ease-of-use and cloud access assure high adoption of the solution—even for occasional users—across departments, sites, and partners, reducing overall risk of noncompliance.

Veeva QualityDocs provides a single, secure application for employees and partners to author, collaboratively review, and approve documents. The cloud model makes it easy and cost-effective to provide all parties with direct access to a single source of truth, eliminating compliance risks associated with other means of distributing copies, such as email or FTP.

QualityDocs also provides greater visibility and control. Predefined lifecycles and workflows enable efficient document control processes, and helps everyone stay on task with approval, training, release, review and withdrawal processes. Compliance managers can monitor status and collect metrics using reports and dashboards to identify risks, bottlenecks, and promote continuous improvement.

Business Benefits

Easy access anywhere, anytime, and from any device enables a single system of record.

Cloud application provide partners secure and easy access.

Quickly establish good quality practices and facilitate 21 CFR Part 11, Annex 11, GMP, and other regulatory compliance.

Reporting and metrics identifies state of control, risk, and drives continuous improvement.

Ease-of-use increases user adoption, minimizing uncontrolled copies.

Features

-  **Always Current, Never Stuck**

With modern cloud Software-as-a-Service (SaaS), you are always current; you won't get stuck with an inflexible application that is heavily customized and quickly out-of-date. Veeva is constantly innovating and validating new releases, so no one gets stuck on an old version. Veeva customers are always on the most current release.
-  **Read and Understood**

Training documents and videos can be delivered easily and cost-effectively for every employee in an organization. With traceability and reporting on all "read and understood" actions, easily track when users view content, sign off on training tasks, or are overdue on activities.
-  **Watermarking and Overlays**

Define and apply dynamic overlays and watermarks on a document's header, footer, or across each page to see the current status or effective date on an SOP. Overlay relevant document, user, or access information onto printed versions of controlled documents so everyone inside or outside of Vault sees the important information.
-  **Document Change Control**

Users can easily request, review and approve, or reject changes to controlled documents. This flexible feature with pre-defined workflows and reports tracks and traces all changes through version-aware relationships.
-  **Periodic Review**

Easily ensure reviews are started and completed in a timely fashion. The periodic review feature automatically triggers review reminders for documents based on predefined rules, and reports can be generated on the status of review tasks across the organization.
-  **Real-time Collaborative Authoring**

Seamless integration between Vault and Microsoft Office Online provides simultaneous authoring for real-time collaboration.
-  **Flexible Workflows**

Best practice workflows and lifecycles improve the authoring, reviewing, approving, issuing, superseding, and obsoleting of quality-focused content. Manage workflow changes with ease: add recipients, delegate tasks, and cancel activities even for in-progress workflows.
-  **Reports and Dashboards**

Time-based reporting let customers leverage best practice reports, including documents set to expire, documents with upcoming periodic reviews, and more. Users and administrators can quickly create their own reports, then copy and share them with other team members, providing a comprehensive view of all content-related activities.
-  **Controlled Copies**

Control who can create document copies and take them outside of Vault. Track individual document copies' statuses in the field or during/after recall.
-  **Signature Manifestation**

With Vault's configurable signature page, organizations choose when and how to display the signatory's name, date, and reason for sign-off, eliminating the need for wet signatures on hard copy documents.
-  **Application Integration**

The open, published Vault API easily integrates with complementary systems, such as QMS, LIMS, and LMS.

About Veeva Quality Cloud

Veeva Quality Cloud enables the management of quality events from event origination to changing controlled content and completing training on a single cloud-based platform. Connecting quality processes, critical documentation, and training—with Veeva QMS, Veeva QualityDocs, and Veeva Training—accelerates and streamlines event identification, correction, and change management. This end-to-end visibility equips organizations to respond to quality events faster, and provides a complete picture of quality management activities to regulators.
