

# LIMS Checklist

What Should Your Business Case Cover?

## Status Quo

- How does paper-based, manual QC impact our lab output?
- Can we easily identify and resolve bottlenecks?
- Do we have clear visibility of data across all our partners?

## Preferred Solution

- What's the total cost of ownership, including infrastructure, validation, and maintenance costs?
- What's the validation burden? Is the vendor undertaking IQ/OQ/PQ – or are we?
- Is there a general lab domain focus, or is it optimized for our QC lab?

## Realizing Value

- How does this solution support outcomes that are important to leadership?
- What's the anticipated impact on, e.g., cycle times, audit readiness, and scalability?
- What are the right value metrics?
- How quickly can we expect value to be generated?

## Success Factors

- What's the right resourcing, from executive sponsorship to implementation resources?
- How can we manage change consistently during and after the roll-out?
- What post-implementation support does our vendor provide?
